## About Me

I am a software developer with a focus on MERN Stack. I have been coding for a little over a year now and have been thoroughly enjoying every moment of it. I specialize in MERN Stack, a technology stack that consists of MongoDB, ExpressJS, ReactJS, and NodeJS. Along with my expertise in MERN Stack, I am also well-versed in Java. I have a solid understanding of data structures and algorithms, and I have solved over 70 LeetCode questions to prove it. Aside from my technical skills, I am also a writer at heart. I enjoy sharing my thoughts and ideas with others and have a passion for writing both technical and non-technical blogs.

## Projects

### Social Media web application

Developed and maintained a MERN-based social media web application with features such as creating posts, liking and commenting on posts, and user authentication through login and sign-up. Utilized my knowledge in web development technologies to bring the platform to life and enhance the user experience. Demonstrated proficiency in JavaScript, React, Node.js, and MongoDB through the successful implementation of this project.

**GitHub Link**

### Uber-alternative with women safety

Developed a MERN-based Uber-alternative with a focus on women's safety, allowing female users to select female drivers for their transportation needs. Utilized React for the front-end and Node.js with MongoDB for the back-end to create a seamless user experience

**GitHub Link**

### Notes website for a hackathon

Created a full-stack note-taking website as part of a hackathon using the MERN stack (MongoDB, Express, React, and Node.js). Designed and developed a user-friendly interface for creating, storing, and managing notes. Utilized MongoDB for data storage and Node.js for server-side functionality.

## Education

| | |
|---|---|
| **1. VVP Institute of Engineering and Technology** | **BTECH CSE (2025)** |
| **2. A.G. Patil Polytechnic Institute** | **Diploma in Computer Engineering (2022)** |

## Academic and Extracurricular Achievements

1. Received a Problem Solving Certificate in Java on HackerRank [Link]
2. Completed a UDEMY course on Node.js, express and mongoDB bootcamp [Link]

## Blogs

1. Technical Blogs [Link]:
   - Advanced Data Modeling with mongodb [Link]
   - Authenticate users like a pro using Node.js, express and mongodb [Link]

## Skills

Java | Javascript | Node.js | Express | MongoDB | React | DSA | Computer Networking | Docker | Kubernetes | Python
